The following are examples. A person tends to have a lower arousal threshold for his or her own name versus someone else’s name.[9] In light sleep, for example, one’s own name spoken softly will produce an arousal; a similarly applied review will not. 3 A. A. Schlarb, K. Achterberg, S. Brocki, A. Ziemann, A. Wiater, F. Lollies, Schlafbezogenes Erziehung verhalten und kindlicher Schlaf, Monatsschrift Kinderheilkunde, 2017, 165, 3, 239

The PIBBS was designed to capture a wide range of parental behaviours used to settle infants off to sleep. The commonest behaviours employed were giving a feed, talking softly to the child, cuddling in the arms, and stroking. 1 Megan Galbally, Marinus van IJzendoorn, Michael Permezel, Richard Saffery, Martha Lappas, Joanne Ryan, Elisabeth van Rossum, Andrew R.
